

WEST-TRANS

SKIP LOADER

- › Tough and agile
- › 12 tonne lifting capacity
- › 4.3M deck length
- › Either 1 x 8M³ or 2 x 2 M³ skip bins

DS 120s-P

High Lift Capacity

The West-Trans DS 120s-P, is the work-horse of the Australian skip industry. Supplied with a standard 4.3M deck, and optimised to high horsepower applications, the DS 120s-P features high capacity pivoting rear stabilisers, fabricated lifting arms and familiar heavy duty load board design.

With West-Trans engineered-in toughness and durability, the DS 120s-P is purpose built for handling 2 x 2 cubic meter bins, or a single 8 cubic meter bin. Like all of the West-Trans Skip and Hook loaders, it is craftsmen built in our factory in Mulgrave (NSW), from high quality parts and materials, and ready to work hard for years.

Being designed and manufactured in Australia, they are, of course, built to meet or exceed all relevant Australia Design Rules, but more

importantly, they are built to handle the toughest conditions Australia can through at them.

All West-Trans skip loaders are protected with an anti-corrosion primer base coat, and 2 coats of high gloss colour.
